Combined with a circulator, the compact Breeze provides rapid heating/cooling and is ideal for applications requiring precise control by solution temperature.

Breeze, Carousel 6, Tornado and overhead stirrer

Designed as an add-on module for the Carousel 6 Plus and Tornado, Breeze creates a parallel process reactor that heats/cool and mechanically stirs six flasks (50ml to 250ml). Breeze can also be used for single reactions using Heat-On and a conventional overhead stirrer. Breeze is ideal for applications that require precise solution temperature control, such as crystallisation studies.

What is the difference between Breeze and Storm?

Breeze: Small benchtop footprint and no insulation results in a narrower operating range of -30°C to +165°C. Yet, because it is smaller, Breeze has a much faster response time to required changes in temperature. This makes Breeze more suitable for applications that require solution control such as crystallisation studies.

Storm: Features a sophisticated internal fluid path that combines with a high performance insulated case to maximise thermal transfer. These features create a temperature control module that has a wide operating range with excellent heat transfer, making Storm ideal for steady state reactions from -65°C to +200°C that require stable temperatures for extended periods with minimal variation across the heated surface.
