NEW

LAUDA Glass capillary viscometers

Viscosity measuring with Ubbelohde, Cannon-Fenske and Micro-Ostwald capillary viscometers

Application examples

- Determining the viscosity number, intrinsic viscosity (average molar mass) and other parameters of technical polymers such as PA, PET, PBT, PE, PP and PVC in accordance with EN-ISO 1628, ISO 307 for the quality control of plastics
- Measuring absolute viscosities of engine oils and other lubricants in accordance with ASTM D445, viscosity index in accordance with ISO 2909 at 40 °C and 100 °C

Accurate and standard-compliant

Glass capillary viscometers are available in various designs, which differ with respect to application area, accuracy and operation. As of now, they can be supplied by LAUDA in the Ubbelohde, Cannon-Fenske, Micro-Ostwald and special designs. For high-precision, automatic measuring, the Ubbelohde version with the suspended level is used by preference, among other reasons because the flow time is independent of the precise sample volume.

To keep the measuring times within the optimum range between approx. 60 and 600 s, different capillary diameters are supplied to cover the complete viscosity range. The procedure, particularly with automatic LAUDA measuring technology and precise temperature control using LAUDA clear-view thermostats, is unrivalled in terms of accuracy for measuring liquids with nearly Newtonian (ideal) flow properties.

Your advantages at a glance

+	The glass capillary viscometer advantages	Your benefits
	• Ring marks with no detection disturbances	• Precise, positioned, NIR permeable ring marks with exactly 40 mm clearance. The capillary constant is valid for stopwatch and automatic measuring systems.
	• Corrosion resistant labelling	• There is no risk of abrasion or etching off of the labelling even with the use of strong acids and aggressive solvents used as samples or cleaning agents.
	• Ubbelohde for dilution series with calibration certificate and filter frit	• Absolute measuring now also possible with calibrated dilution viscometers. The integrated frit ensures filtration when the sample dissolves in the viscometer.
	• Complete process chain from one supplier	• LAUDA supplies all components for the viscosity application – clear-view thermostats, automatic viscosity measuring systems and glass capillary viscometers.
	• Customer-specific variants available on request	• LAUDA supplies special variants as desired by the customer, specifically for adaptation to automatic measuring systems.

LAUDA Glass capillary viscometers

Ubbelohde Viscometers

For automatic and stopwatch measuring. Standard design with no thread for easy removal prior to external cleaning.

- ISO 3105, DIN 51562, BS 188, NFT 60-100
- Fill volume: 15...20 ml
- Total length: approx. 290 mm
- Measuring accuracy: $\pm 0.2\%$

Also available as ASTM version

Ubbelohde Viscometers for automatic cleaning

For automatic and stopwatch measuring. With screw connections and aspirating tube for permanent installation. Recommended for automatic cleaning with LAUDA VRM modules.

- ISO 3105, DIN 51562, BS 188, NFT 60-100
- Fill volume: 18...22 ml
- Total length: approx. 290 mm
- Measuring accuracy: $\pm 0.2\%$

Micro-Ubbelohde Viscometers

For small sample quantities and/or short measuring times. Design with no thread for easy removal prior to external cleaning. Compatible with LAUDA VRM modules.

- DIN 51562/2
- Fill volume: 3...4 ml
- Total length: approx. 290 mm
- Measuring accuracy: $\pm 0.5\%$

Micro-Ostwald Viscometers

For small sample quantities and/or very short measuring times. Design with no thread for easy removal prior to external cleaning. Compatible with LAUDA VRM modules. Precise volume input required. Especially recommended for heavy-foaming samples.

- Fill volume: 2 ml
- Total length: approx. 290 mm
- Measuring accuracy: $\pm 0.5\%$

LAUDA Glass capillary viscometers

Cannon-Fenske Routine Viscometers for automatic cleaning

Viscometers for automatic and stopwatch measuring. With screw connections and aspirating tube for permanent installation. Recommended for automatic cleaning with LAUDA VRM modules. Precise volume input required.

- ISO 3105, ASTM D 2515, BS 188
- With filling and cleaning tube
- Fill volume: approx. 5...10 ml
- Total length: approx. 245 mm
- Measuring accuracy: $\pm 0.3\%$

Ubbelohde Dilution Viscometers

For convenient implementation of dilution series and determining concentration dependencies, e.g. IV value measuring of polymers. Standard design with no thread for easy removal prior to external cleaning. Can be connected with LAUDA VRM modules and dosing units. Recommended for automatic measuring with LAUDA viscosity measuring systems.

- Fill volume: 15...75 ml
- Total length: approx. 290 mm
- Measuring accuracy: $\pm 0.2\%$

Application table

LAUDA supplies glass capillary viscometers in various designs. Use the following table to see which capillary is best suited for your application.

	Ubbelohde	Micro-Ubbelohde	Micro-Ostwald	Cannon-Fenske Routine
Manual measuring	++	++	+	+
Automatic measuring	++	++	+	+
Frothing liquids	○	○	+	+
Volatile samples	○	○	+	+
Small samples/detergent quantities	-	++	+	-
High/low temperature	+	+	○	○
Black and used oils	○	-	-	○

++ Use by preference

+ Well suited

○ Less suited

- Unsuitable
