

Lode Imaging

Ergometry devices for studying the effects of exercise or stress on the body

Lode for Imaging

In our commitment to advancing medical imaging, Lode offers specialized equipment to complement X-ray, MRI, and echocardiography. Our ergometry devices guarantee precise load application, facilitating healthcare professionals in obtaining standardized data for accurate diagnoses and treatment plans. Elevate your imaging capabilities with Lode, where innovation meets excellence.

Diverse product range

Explore our range of products, including the MR Ergometer and Angio imaging ergometer, designed for seamless integration with imaging modalities.

- 🔗 The **MR Ergometer**: MR conditional and adjustable up to 300 watts, ensures safe use in the MRI room.
- 🔗 The **Angio**, with a compact design and 7-1000 watts range, accommodates sitting and supine ergometry, catering to diverse needs.
- 🔗 **Lode Ergometry Manager (LEM)** software enhances the imaging experience, providing real-time data analysis and storage. Tailor the user-friendly and customizable software to your specific needs, achieving accurate and standardized data during exercise testing or stress analysis. Make informed decisions about patient care with reliable physiological data.

No need for stress-induced medication

Our specialized products facilitate non-pharmaceutical stress analysis, ensuring a more enjoyable experience for patients.

X-ray, MRI and echocardiography

Ergometry devices provide standardized and precise load application to the heart, muscles, and organs. Therefore, making it easier to identify deviations during medical imaging. These devices are highly beneficial in professional settings such as X-ray, MRI, and echocardiography. Lode has developed specialized ergometry devices for each of these modalities

What people say

“I have predominantly relied on Lode ergometers. They have never failed, are intuitive and bullet proof.”

*Prof Andre La Gerche, MBBS, PhD
Heart Lab St Vincent's Institute Melbourne*

“The MR Ergometer fits well in our set-up since 2017. Our radiographers and patients have excellent feedback on the comfort and ease of use.”

Calvin Chin - National Heart Centre Singapore
